Main Navigation
Landing Screen/Home
On tapping "show list", half of the list view comes up from the bottom
On further swiping up the list view covers up the whole screen and swipe down will close the list view
Users have the option of sorting as well. Touch point for the sort icon
Zero State for Tags List
Users can change location of the live map by going into the organization tree and seeing the locations in a more structured manner
User can select from the list of organization
On tapping the building icon, the summary panel for that building will appear
Likewise tapping on the asset icon, brings up the summary panel
On further swiping up, user is able to view floors and select a floor
Tag List is divided into two parts - Objects and People since its easier for navigating through the different databases
User can bookmark Categories or individual tags
Tag Detail screen has all the data related to that asset
On the leaf node user is able to locate the tag on the map
From Live, users are able to quick access their marked tags
Settings are divided into Account and Location
Users can filter for tags based on different statues.
Each status has three different states - a positive, a negative and both
Zero State Bookmark Screen
Backend Error
Network Error
Search Screen- First Time User
Along with search, this user can also browse through the portfolio of categories
Difference : Last 5 recent searches also appear
Search Screen- Second Time User
Search Screen- No Data found
Categories are divided in objects and people tabs so that users are able to do a more focused browsing
Categories applied show up as chips on the search screen and the search can further be built up
After user has applied his search items they appear on the current live floor
